

MODEL HAG-100/HAF-100 HAND TAPE APPLICATOR

The Model HAG-100 Hand Applicator for glass and HAF-100 Hand Applicator for Frames are designed to apply VHB tape from 3/8 - 2 wide in an accurate and efficient method along the edge of a product.

Using these applicators the operator can manually guide the tape onto a glass panel or frame using a guide to reference the tape to the edge of the product. The tape is manually cut.

The HAG-100 is designed to apply tape directly to a glass or panel surface. The HAF-100 is designed to apply tape to a glazing frame when a metal lip is present. It allows tape to be applied in areas where there may be an obstruction just off the bonding area.

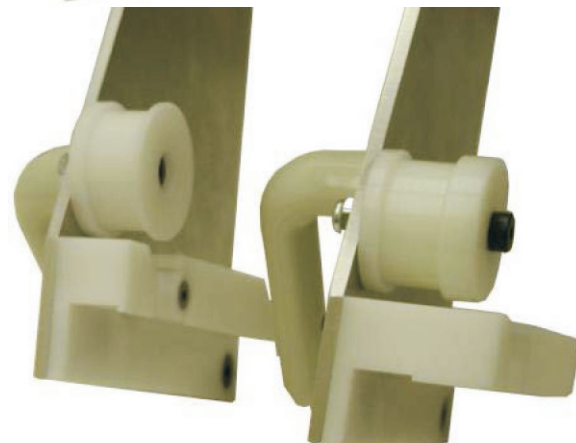

PRODUCT SPECIFICATIONS

Tape Roll Diameter: 14" OD on a 3" ID core

Tape Width: One standard applying roller and guide comes with the unit. Standard sizes are

Size: 7" wide x 12" high x 7" wide
